# Coho Escapement Data 2017 - 10 Year Averages

## Proportional Change from Earliest Average vs Most Recent Average (%)

- >100
- 0 to 100
- No Change
- 0 to -50
- <-50
- Insufficient Data

## Most Recent 10 Year Average

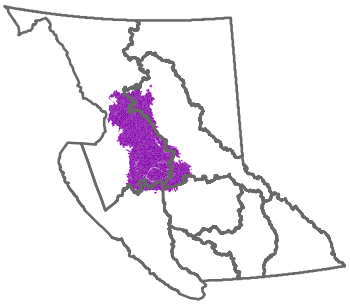

- <100
- 100-1000
- 1000-2000
- 2000-5000
- >5000

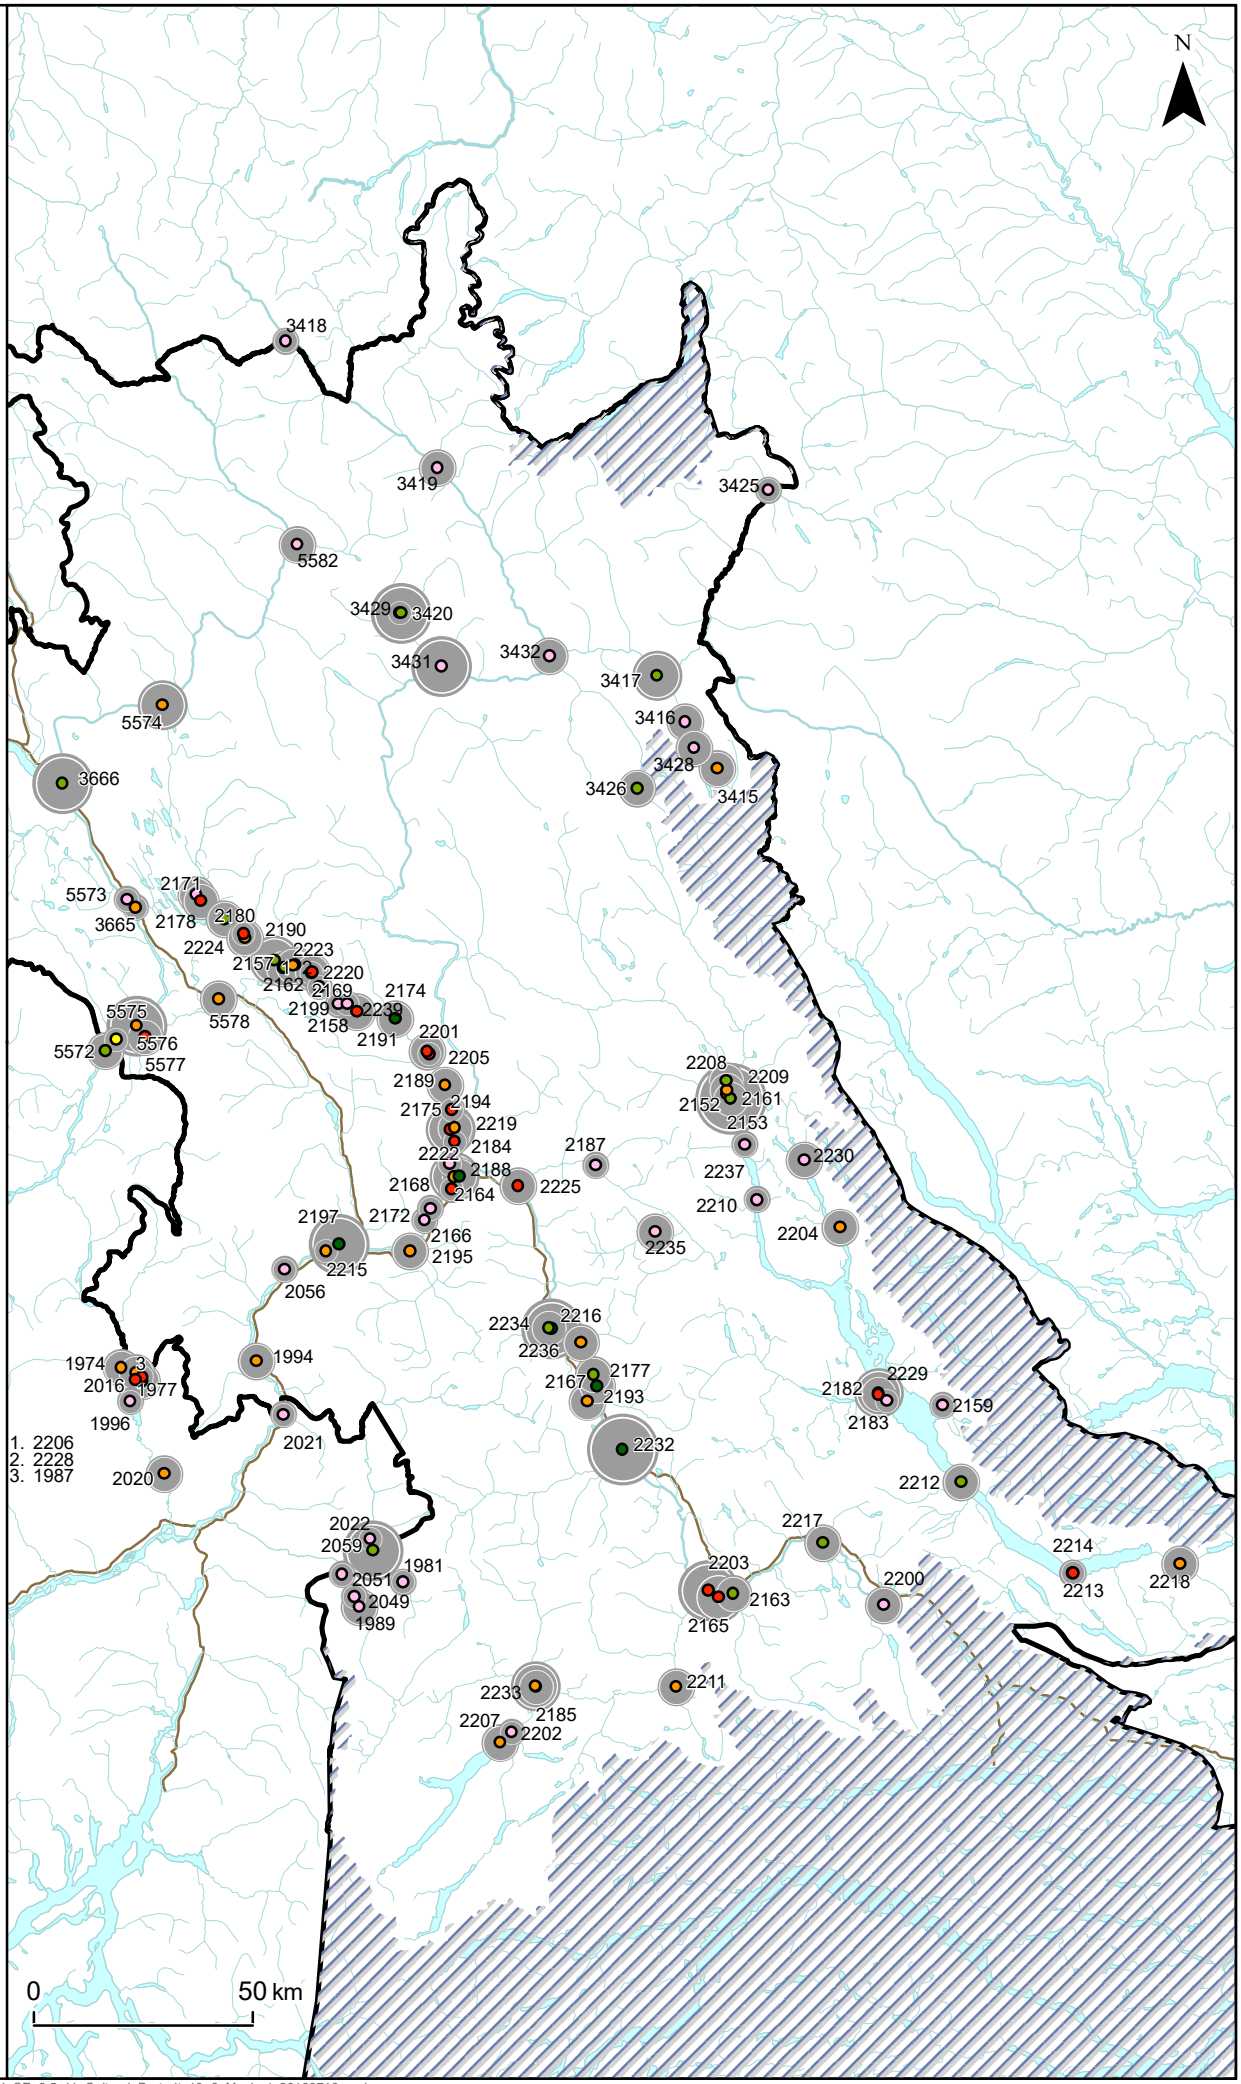

Labels are Stream ID, and can be used to cross reference with tables in report.

-Ranges used for evaluating changing escapement averages at indicator streams (where possible to calculate) are for the first 10 years of records (may not be consecutive years) vs. the most recent 10 years of records (may not be consecutive years). For indicator streams with less than 11 years of data all available information was averaged (but not used for historical comparisons). If only one data point was available that single entry was presented.

## Boundaries

- ESI SSAF Boundary
- Area Without Escapement Representation
